

## Product

### PRO-TREAT® In-Line Switch & Slow-Release Treatment System

## Purpose

The Asurity® BG-400 PRO-TREAT® Series is a revolutionary, in-line auto-dosing treatment delivery system. As the condensate water flows through the treatment tablets, the Pro-Treat Neutralizer is gradually released into the condensate line, continuously dosing it with treatment to maintain clear, properly flowing lines for up to 6 months. BG-402 also includes a latching switch that automatically turns off the system to prevent flooding and system malfunctions. BG-400 is the in-line treatment only solution.

## Features

- Auto-dosing treatment keeps drain lines clean for up to 6 months
- Formulated with copper and zinc to eliminate odors
- Unique integrated latching switch
- Prevents pan overflow and damage
- Treatment tablets dissolve overtime, allowing the next tablet to move into place.
- Works with standard condensate lines
- Easily integrates to HVAC systems
- Simple to install and maintain
- When the cartridge has depleted, replace with PRO-TREAT® In-Line Slow-Release Treatment Replacement Cartridge (BG-40R) sold separately.

## General Specifications for BG-402

- 24 VAC
- 4 AMP
- UL 508 approved
- 60 in. Wire
