P6100 WHOLE HOUSE POLARIZED MEDIA AIR CLEANER Installation and Maintenance Instructions

The PremierOne P6100 polarized media air cleaner is the most, efficient, powerful, and effective electronic air cleaner on the market today. Properly installed, the air cleaner creates a healthier living environment by removing harmful air pollutants.

UNPACKING THE UNIT

The following parts are included:

- P6100 polarized media panel
- Two (2) filter pads. (one installed)
- Power cord

INSTALLATION

1. Turn off power to the air handler
2. Remove the existing filter from the track.
3. All forced-air systems have an internal 24 volt AC power source to which the air cleaner may be connected without overloading other circuits. Before connecting your Air Panel, you must locate the 24 volt AC power source.

Alternately install a separate 5VA or larger 24V power supply for the air cleaner.

4. After locating the 24 VAC power supply, connect the leads of the power cord as illustrated in our electrical wiring diagram. Connect the black wire with white stripe (or red wire) to R and the other wire to C. See diagram Typical Terminal Block Configuration

For filter grill installation we recommend cycling with the system fan.

5. Slide the Air Panel into the track and plug the power cord into the power head. (As shown below)

PERIODIC MAINTENANCE

Your collector cushion pad should last 2 to 4 months, depending on the amount of air pollutants and fan usage. For maximum effectiveness of the home electronic air cleaner, we recommend that the fan control on the thermostat be in the ON position.

Warning: Failure to change the collector pad on a regular basis will result in a reduction of air flow through the air handler system. This can cause short cycling of your air handler system and may cause damage to your equipment.

REPLACEMENT FILTER KITS

Replacement filter pads available from your contractor come in packs of three (3) which is usually enough for one year.

REPLACING THE PAD

1. Turn off the power on the air handler.
2. Open the air handler filter access door.
3. Unplug the 24 volt power-cord from the power head.
4. Remove the Air Panel.
5. Clean heavy accumulated dust on the outside screen with a vacuum.
6. Open the panel and remove the Collector Pad and discard it into a garbage bag to avoid dust.
7. Insert the collector pad by sliding the electrode into the color tubing built into the pad.
8. Close the air panel and plug the 24 volt power cord into the power head.
9. Restore the air handler power.

Note: You may hear a little snapping noise at the beginning. This is normal and is caused by variations in temperature and humidity. The snapping noise should cease after a few hours of operation. If the noise persists, contact your electronic air cleaner dealer.
