Tested, Tried, and True!

That's what you get when you choose products from Baker Water Systems!

Pictured left: The Plant Manager of Campbell is performing a quality test on our stainless steel check valve using the Thermo Niton XRF Analyzer. The Niton XRF Analyzer is able to determine the lead content of the part to ensure it is lead free compliant; and also the grade of stainless the product is manufactured out of. In addition, the employees who conduct the tests using this piece of equipment are all professionally trained on how it works.

Pictured Right: The image the gun displays shows the material makeup of the part including lead content and grade of material.

Legislation for water system components is changing on January 1, 2014.

Baker Water Systems is committed to providing products now that are compliant so you can be ahead of the curve! We continually test and monitor all products to ensure we are delivering the highest quality of lead free products on the market!

In addition Baker offers the following:

- ♦ 5 Engineers on staff
- Quality Control
- On-site testing capabilities
- Experience manufacturing products since 1873

"The bitterness of poor quality remains long after the sweetness of low prices."

Know that when you choose Baker Water Systems, you can be confident in the products you use, because we stand behind them 100%!
