New products from Viega

We pride ourselves on leading the industry while remaining connected to our customers. Every day, we open our doors and create products that change the way engineers and mechanical contractors do business. It's our job to engineer forward-thinking products. That's our commitment to the trades: we understand what is needed for the future.

Industry connection and product innovation is as important today as it was for our founders 120 years ago. That's why Viega remains the global leader in residential, commercial and industrial press fitting technology. We continue to bring new products to market.

Viega MegaPress Stainless XL 304

Viega's MegaPress Stainless press fittings in 304 stainless steel, with an FKM sealing element, now come in larger sizes, from 2½" to 4". Suitable for use with Schedule 10 through Schedule 40 pipe, MegaPress Stainless XL helps save labor costs and system downtime and eliminates the need for threading, grooving and welding on larger diameter pipes.

Viega MegaPress Stainless XL 316

Viega's MegaPress Stainless press fittings in 316 stainless steel, with an EPDM sealing element, now come in larger sizes, from 2½" to 4". Suitable for use with Schedule 10 through Schedule 40 pipe, MegaPress Stainless XL helps save labor costs and system downtime; eliminates the need for threading, grooving and welding on larger diameter pipes; and is approved for potable water, among many other applications.

The MegaPress Press-in Branch Connector

This innovative connector provides a way to create branches from main runs or install instrumentation onto existing piping. The branch connector installs onto carbon steel pipe in sizes 1½" through 4", as well as 6", and has a ¾" FPT outlet. The MegaPress Press-in Branch Connector is approved for use in hydronic heating, cooling water applications, compressed air and many more thanks to a variety of sealing elements.

PureFlow Press Fire Rated Outlet Boxes

The same trusted PureFlow Press connections are now available for fire rated outlet boxes. Availability includes washing machine and ice maker boxes, both with and without water hammer arrestors. This new configuration allows for easy installation for commercial and multifamily applications where fire rated outlet boxes are required.
