

Oasis VersaFilter® System

Unparalleled Filter Performance and Flexibility

Tested and certified by NSF International to comply with NSF42 and 53 standards

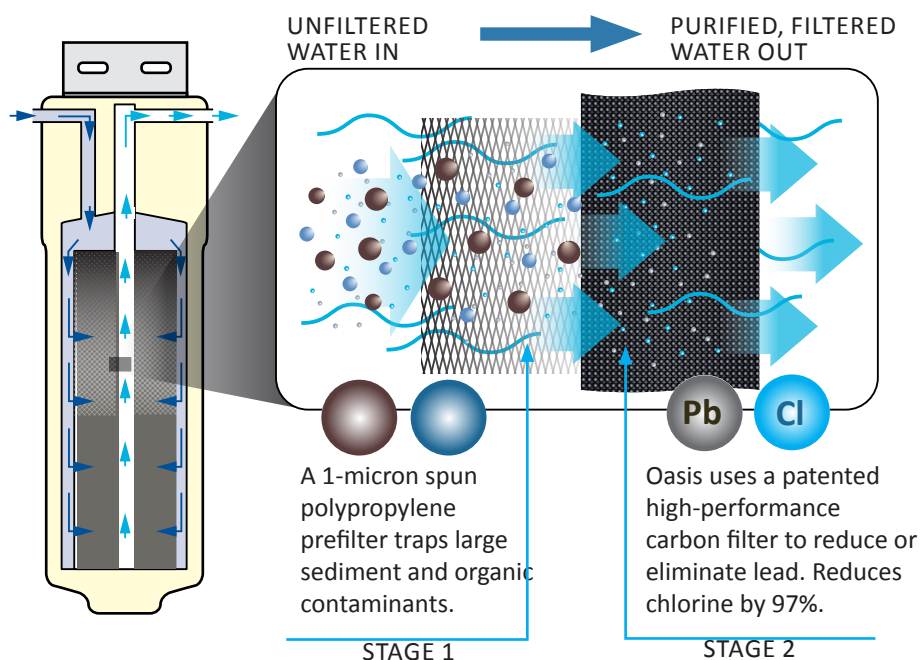

- Reduces **CHLORINE** by 97% (ANSI/NSF 42)
- Reduces **LEAD** between 95.9% and 99% (ANSI/NSF 53)
- Reduces cryptosporidium and giardia **CYSTS** by 99.99% (ANSI/NSF 53)

Oasis Water Coolers when equipped with the VersaFilter System:

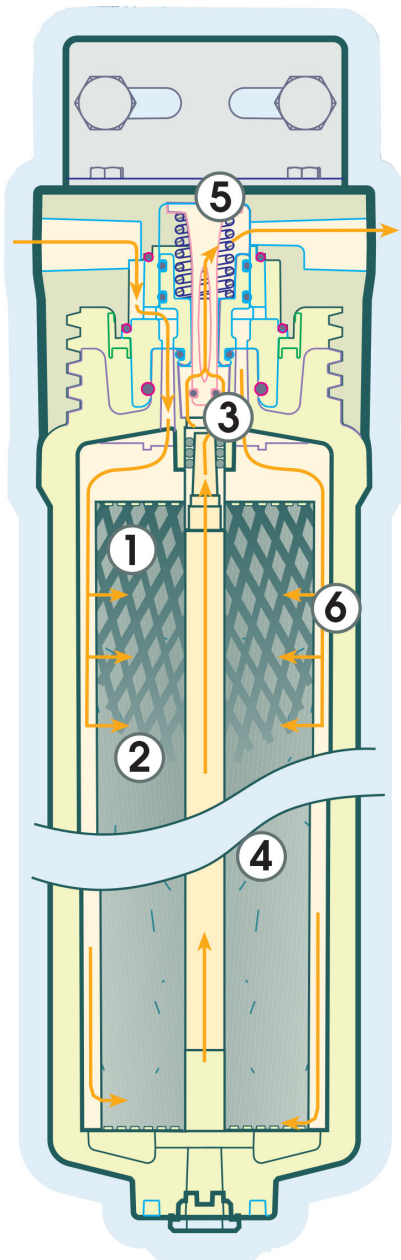

- Provides a flexible water treatment solution, which effectively reduces chlorine, odor, lead and cysts
- Improves the taste and appearance of drinking water
- Offers the highest performance in the most “user friendly” package available

The VersaFilter is factory installed on many Oasis water coolers. It is also available as a replacement system.

Oasis VersaFilter[®] System

Oasis Innovative Filter Design Provides Quick and Easy Installation

- 1 Spun polypropylene prefilter wrap extends the life of the filter by protecting the media from premature plugging due to sediment.
- 2 Unique formulation of powdered carbon plus a patented lead reduction media for high performance filtration. Compression molded into a tight block for maximum contaminant and cyst reduction.
- 3 Triple O-Ring seal ensures no bypass.
- 4 Radial flow-through filter design utilizes entire media area for maximum performance and minimal pressure drop.
- 5 Patented shut-off valve engages automatically as filter is inserted or removed.
- 6 Self-contained sealed cartridge ensures that hands do not touch the filter media reducing the potential for introducing bacteria.

The Oasis VersaFilter is easily accessible from inside the cooler for fast and easy filter changes. An automatic shut-off inside the filter eliminates the need to locate the water valve. Durable constructed, VersaFilter is designed to last 1,250 gallons or approximately six months.

Retro Kits/Brackets

The VersaFilter filtration system can be retro fitted to a variety of Oasis water coolers. Both kits include brackets, complete VersaFilter, and color coded waterline connections.
